

Phạm Anh Dũng

FULLSTACK WEB DEVELOPER

☎ 0945152920 ✉ mrcat88vthp@gmail.com 📅 05/06/1988
📍 389 Đặng Hải, Hải An, Hải Phòng 🌐 react-projects-nu.vercel.app/

ABOUT ME

1. Professional Summary

Senior .NET Full-Stack Developer with over 7 years of experience in building enterprise web applications and complex backend systems.

- Strong expertise in C#, .NET Framework, and ASP.NET Core (.NET 6–8), with solid experience in system design using Service-Oriented Architecture (SOA) and Clean Architecture principles.
- 2 years of experience in backend development using Node.js (Express.js framework).
- 5 years of experience in developing modern user interfaces using React.js, Tailwind CSS, and Shadcn UI.
- Deep understanding of relational databases (Oracle, Microsoft SQL Server), especially in handling large-scale data processing and system performance optimization.
- Experienced in working in Jira-managed environments, remote teams, and enterprise-level projects requiring high reliability and performance.
- Portfolio: <https://portfolio-cyan-phi-52.vercel.app/>

2. Skills

2.1. Backend

- C#, .NET Framework, ASP.NET Core Web API (.NET 6–8)
- Entity Framework Core
- RESTful API design
- Authentication & Authorization (JWT, Role-Based Access Control, Policy-Based Access Control)
- Clean Architecture
- OOP, SOLID principles
- Node.js, Express.js

2.2. Frontend

- React.js
- JavaScript / TypeScript
- Tailwind CSS, Shadcn UI

2.3. Database

- Oracle, Microsoft SQL Server
- Query optimization, indexing, execution plan analysis
- Partitioning and sub-partitioning for large datasets

3. Workflow & Practices

- Task management using Jira
- Code review, clean code, maintainability
- Performance optimization and debugging
- Remote working

WORK EXPERIENCE

VNPT

Senior Software Developer – VNPT

(Oct 2013 – Jan 2026)

- Developed and maintained enterprise web applications and internal systems for large-scale organizations.
- Built full-stack web solutions using React.js (frontend) and ASP.NET Core Web API / Node.js (Express.js) (backend).
- Participated in developing e-Government platforms (Level 3 online public services).
- Designed and implemented backend modules following Clean Architecture principles, ensuring low coupling and high maintainability.
- Worked with large-scale data systems, focusing on performance, scalability, and system reliability.
- Managed tasks using Jira and consistently delivered features on schedule.

Oracle Database

10/2013 – 01/2026

VNPT

Project: Centralized Production & Business Management System

Role: Data Specialist

Responsibilities:

1. Data Migration (Legacy → New System)

- Analyzed legacy systems and data storage structures.
- Mapped data from the old system to the new system, including designing mapping documents for large-scale data migration.
- Developed T-SQL scripts, functions, and stored procedures to handle data migration.

2. Query/Procedure Optimization

- Analyzed existing SQL scripts, functions, and stored procedures.
- Understood business logic embedded in database operations.
- Identified performance bottlenecks and measured execution time of queries.
- Optimized slow queries using techniques such as indexing, query hints, temporary tables, etc.
- Validated data consistency after optimization to ensure correctness compared to the original logic.

3. Database Refactoring

- Refactored database schema by splitting large tables into smaller domain-based tables.
- Applied proper indexing strategies to improve query performance.
- Improved overall database design for better scalability and maintainability.

EDUCATION

Vietnam Maritime University

09/2006 – 03/2011

Bachelor – Information Technology

SKILL

Core skills

C# (10 years) ASP.NET (6 years) .NET Core (5 years) Oracle (5 years)

ReactJS (5 years) SQL server (5 years) ASP.NET CORE API (3 years)

NodeJS (3 years) ExpressJS (2 years)

FOREIGN LANGUAGE

HIGHLIGHT PROJECT

Centralized Production & Business Management System

10/2019 – 01/2026

Project: Centralized Production & Business Management System

Role: Data Specialist

Responsibilities:

1. Data Migration (Legacy → New System)

- Analyzed system architecture and data storage structures.
- Mapped data fields from the legacy system to the new system and created detailed mapping documentation for large-scale data migration.
- Developed T-SQL scripts, functions, and stored procedures to perform data transformation and migration.

2. Query, Stored Procedure & Function Optimization

- Reviewed and analyzed existing SQL scripts, stored procedures, and functions.
- Studied business logic embedded in procedures/functions.
- Identified performance bottlenecks and analyzed query execution time.
- Optimized slow queries using techniques such as indexing, query hints, temporary tables, and query refactoring, while measuring performance improvements.
- Validated and reconciled data after optimization to ensure consistency and accuracy with the original logic.

3. Database Refactoring

- Applied database normalization and logical decomposition to improve structure and maintainability.
 - Avoided overly wide tables by splitting them into domain-based tables aligned with business logic.
 - Designed and implemented appropriate indexing strategies to improve query performance and data retrieval speed.
-

Centralized Production & Business Management System

01/2013 – 09/2019

1. Project Overview

The Enterprise Production & Business Management System is designed to manage and operate telecommunications business activities for enterprise customers.

The system supports:

- Registering new subscriptions with enterprise-specific promotional policies.
- Updating subscriber information (e.g., bandwidth speed, address, etc.) and activating services on the telecom system.
- Registering new policies for existing subscribers based on business rules.
- Allowing subscribers to switch policies based on enterprise-defined business logic.

2. Role

Sub-Project Manager (Sub PM) – Responsible for billing modules of two services

Responsibilities:

- Collaborated with business stakeholders to analyze requirements and business problems.
- Proposed technical solutions aligned with business needs.
- Designed database structures (tables, primary keys, indexes) to efficiently support business logic.
- Broke down business requirements into system-level functional modules.
- Created tasks, functional specifications, and UI descriptions (Figma) for the development team.
- Participated in feature development and resolved technical issues during implementation.

Technologies & Implementation

Backend

- **.NET Core:** Built RESTful APIs handling complex calculations with high-performance requirements.
- **Node.js / Express.js:** Developed a middleware layer to handle client requests, call .NET Core APIs, and return responses to the client.
